FCT Fundação para a Ciência e a Tecnologia

TRIBUNAL: Tribunal Administrativo e Fiscal de Coimbra.

PROCESSO: 333/11.0BECBR.

FCT/4160/11/7/2011/S

ARTICULADO: Contestação.

VALOR: 30. 001,00 Euros (trinta mil e um euros).

JUNTA: Despacho de designação de Jurista, Processo Administrativo, Regulamento de Formação Avançada e Qualificação de Recursos Humanos de 2008 e 2010, Guia de Avaliação – doc. nº 1, N/ ofício nº 023512 – doc. nº 2.

AUTOR: Paul Colin Gloster.

RÉ: Fundação para a Ciência e Tecnologia, I.P.

Exmo. Sr. Meritíssimo Juiz de Direito do Tribunal Administrativo e Fiscal de Coimbra

A FUNDAÇÃO PARA A CIÊNCIA E TECNOLOGIA, I.P., NIPC 503904040, com sede na Avenida D. Carlos I, 126, em Lisboa, vem, na acção administrativa especial, supra melhor identificada, intentada por PAUL COLIN GLOSTER, oferecer o seu articulado de

CONTESTAÇÃO,

ao abrigo do estipulado no artigo 83º do CPTA, o que faz nos seguintes termos e fundamentos:

1º

Aceita-se o vertido nos artigos 1 a 8, 10, 40, 41, 44, 49, 50 e 54 da Petição Inicial (PI).

2º

Contesta-se nos termos infra os artigos 9,11, 12 a 40, 42,43,45 a 48, 51 a 53 da PI.

I- DEFESA POR EXCEPÇÃO:

3º

O A. foi opositor em 2008, ao Concurso Público da R. para atribuição de bolsas individuais de doutoramento.

4º

À candidatura foi dada a referência SFRH/BD/46372/2008.

5º

À candidatura foi atribuída uma **classificação de 3, numa escala de 0 a 5**, conforme documento a fls. 55, do Processo Administrativo (PA).

6º

Em **2008/12/09**, foi o A. notificado, em fase de audiência prévia, nos termos dos artigos 100º e 101º do CPA, do projecto de decisão de não atribuição de bolsa, conforme documento constante a fls. 56. do PA.

7º

Em **2008/12/16**, o A. exerceu o seu direito de participação procedural, conforme documento nº 58 do PA.

8º

Em **2009/02/09**, foi o A. notificado da decisão de não atribuição de bolsa, conforme documento a fls. 59 do PA.

9º

Reclamou o A. da decisão final, nos termos nº 4 do art. 24º do Regulamento de Formação Avançada e de Qualificação de Recursos Humanos de 2008 (**RFAQRH 2008**).

10º

A reclamação foi indeferida e mantida a classificação de 3 ao A., o que implicava a não concessão de bolsa, dado que a linha de concessão de bolsa fixou-se em 4.

11º

O acto administrativo definitivo, consubstanciando na decisão final de não atribuição de bolsa, foi notificado ao A. em **2009/07/20**, conforme documento a fls. 60 do PA.

12º

O prazo de impugnação judicial iniciou-se em **2009/09/01**, tendo-se suspendido em férias judiciais, no período ocorrido entre 2009/07/20 (data da notificação da decisão) e 2009/08/31.

13º

Assim, o prazo de impugnação judicial terminou em **2009/11/30**, nos termos conjugados da alínea b) do nº 2 do art. 58º e do nº 1 do art. 59º, ambos do CPTA.

14º

Dado que a acção em causa foi intentada a **2010/05/09**, mostra-se manifestamente extemporânea, uma vez que foi deduzida para além do prazo disponível para o efeito, que terminou em **2009/11/30**.

15º

Tal facto, obsta ao prosseguimento do processo, pelo que ao abrigo da alínea h) do nº 1 do art. 89º do CPTA, deve a presente acção ser rejeitada.

16º

Não tendo o acto administrativo sido objecto de impugnação contenciosa, consolida-se na ordem jurídica, passando a constituir caso resolvido ou caso decidido com valor de caso julgado. AC de 20.01.1987].

Subsidiariamente,

II- DEFESA POR IMPUGNAÇÃO:

A) Quanto ao Concurso de atribuição de bolsas de doutoramento de 2008:

17º

No âmbito do concurso de atribuição de bolsas de doutoramento são critérios de avaliação os que se encontram no Guião de Avaliação, que se junta como doc. nº 1, a saber: Mérito do Candidato, Mérito do Plano de Trabalhos e Mérito das Condições de Acolhimento.

18º

O A., discorda, da classificação obtida no critério Mérito do Candidato.

19º

Classificação essa que foi de 2 em 5, nos termos do Guião de Avaliação.

20º

Ora o A. possui formação académica realizada no estrangeiro.

21º

Tal matéria, está prevista no Guião de Avaliação de 2008, que estabelece “o Painel de Avaliação deverá procurar estabelecer uma equivalência entre a classificação obtida pelo candidato e o sistema de classificação em vigor em Portugal”.

22º

À luz do disposto no Estatuto do Bolseiro de Investigação, aprovado pela Lei nº 40/2004, de 18 de Agosto, e que abrange as bolsas destinadas a financiar, entre outros, “trabalhos de investigação tendentes à obtenção de grau ou diploma académico pós-graduado”, as “categorias de destinatários” do financiamento em causa, constam do regulamento próprio de concessão da bolsa, *vide artigos 2º nº 1 alínea a), 6º nº 1 alínea c) daquele Estatuto.*

23º

Determina o Regulamento de Formação Avançada e Qualificação de Recursos Humanos, que podem candidatar-se a bolsas de doutoramentos “ quem satisfaça as condições previstas no nº 1 do art. 30º do D.L nº 74/2006, de 24 de Março e no art. 17º deste regulamento”.

24º

Conclui-se assim que a R. admite como candidatos a uma bolsa de doutoramento, todos aqueles que reúnem já os requisitos académicos e/ou curriculares para o acesso ao ciclo de estudos conducentes ao grau de doutor.

25º

No que toca a potenciais candidatos com formação académica obtida no estrangeiro, o RFAQRH é omissão quanto à questão do reconhecimento/ equivalência dessas mesmas habilitações, sendo que

26º

inexiste ao nível da União Europeia, diferentemente do que ocorre no domínio do reconhecimento de habilitações profissionais para o exercício de certas profissões – um princípio geral de reconhecimento automático de diplomas, pelo que revelam as competências dos Estados Membros para decidir se e em que termos pode ter lugar o reconhecimento de qualificações académicas obtidas no estrangeiro.

27º

Em Portugal, esse reconhecimento vem disciplinado no D.L. nº 341/2007, de 12 de Outubro, diploma que instituiu um novo regime jurídico na matéria.

28º

Quanto aos graus académicos estrangeiros que não tenham sido, nestes termos, genericamente reconhecidos, mantém-se em vigor o D.L. nº 283/83, de 21 de Junho, com as alterações introduzidas pelo D.L. nº 341/2007.

29º

Este regime estabelece um mecanismo de equivalência/reconhecimento de habilitações estrangeiras de nível superior às correspondentes habilitações portuguesas, com base numa reavaliação, caso a caso, do mérito científico dos requerentes, **da exclusiva competência das instituições do ensino superior.**

30º

Note-se que o legislador ressalvou a possibilidade de os titulares de equivalência ou reconhecimento obtidos ao abrigo do D.L. nº 283/83, requererem o reconhecimento ao abrigo do novo regime jurídico do novo regime jurídico vertido no D.L. nº 341/2007.

31º

Dada a ausência de norma que proíba a R, no caso de um candidato com formação académica realizada no estrangeiro, de admitir e avaliar a respectiva candidatura a uma bolsa individual por si financiada, sem que o A. tenha promovido o procedimento interno de que depende, por força da lei, a produção da totalidade dos efeitos do reconhecimento/equivalência das suas habilitações, incluindo da respectiva classificação final.

32º

A prática da R. – de admitir e avaliar candidaturas sem que os candidatos apresentem o reconhecimento/ equivalência das suas habilitações, implica que nessa situação cabe ao painel de avaliação procurar estabelecer uma equivalência entre a classificação obtida pelo candidato e o sistema de classificação em vigor em Portugal,

33º

O que releva uma perspectiva de abertura e actuação mais favorável, não tornando assim inadmissível uma candidatura a bolsa de investigação de um candidato que não possui o reconhecimento/ equivalência das suas habilitações estrangeiras, possibilitando-lhe então o acesso ao financiamento pretendido.

34º

Não está em causa, ser a própria R. a conceder equivalência a determinado grau ou a proceder ao reconhecimento de um grau académico superior estrangeiro, incluindo a respectiva classificação final,

35º

mas muito distinta e tão-somente, avaliar através de painel de peritos independentes, para fins exclusivos de concessão de uma bolsa de investigação e em dada situação em concreto, o mérito do candidato,

36º

revelado também em uma habilitação académica obtida no estrangeiro, e ponderado conjuntamente com os outros critérios predefinidos de avaliação de candidaturas.

37º

Está em causa a R. conceder a possibilidade a candidatos com habilitações obtidas no estrangeiro de serem opositores ao concurso de atribuição de bolsa por si financiadas, sem que esses mesmos candidatos, tenham desencadeado e/ou apresentado o reconhecimento/ equivalência das suas habilitações, nos termos do regime legal descrito.

38º

Desta forma, refuta-se totalmente a alegada incompetência na operação alegada pelo A,

39º

dado que a R. não *concedeu equivalência a determinado grau ou a proceder ao reconhecimento de um grau académico superior estrangeiro, incluindo a respectiva classificação final*,

40º

mas muito distinta e tão-somente, avaliar através de painel de peritos independentes, para fins exclusivos de concessão de uma bolsa de investigação e em dada situação em concreto, o mérito do candidato, revelado também em uma habilitação académica obtida no estrangeiro, e ponderado conjuntamente com os outros critérios predefinidos de avaliação de candidaturas.

41º

Assim, operou o Painel de Avaliação, o seguinte sistema de equivalência entre a classificação obtida pelo candidato e o sistema de classificação em vigor em Portugal, recorda-se que tão-somente para efeitos de concessão de bolsa de investigação,

42º

considerando uma classificação final de 12 valores, na sua licenciatura, que levou o candidato a obter no parâmetro “Mérito do Candidato”, a classificação de 2.

43º

Invocou o candidato a incompetência e consequente nulidade do acto administrativo e requereu a revogação do mesmo, por parte da R.,

44º

foi notificado do seu indeferimento, pelo n/ofício nº 023512, que se junta como doc. nº 2, para os devidos efeitos.

45º

Se a R., levasse em linha de conta os fundamentos aduzidos pelo A., designadamente a incompetência para proceder à equivalência, para efeitos de concessão da bolsa, **então**

46º

em última instância, não seria ao A. possível concorrer à atribuição de bolsas da R., por falta de habilitações!

47º

Conclui-se assim pela validade do acto ora em crise, pelos fundamentos supra aduzidos.

B) Quanto ao Concurso de atribuição de bolsas de doutoramento de 2010:

48º

Em 2010 apresentou o A. nova candidatura.

49º

Não foi concedida bolsa, dado que o A. obteve a classificação final de 4,0, sendo que a linha de corte na sua área científica foi de 4,17.

50º

Continua o A., em 2010, sem ver reconhecida a sua habilitação para efeitos de licenciatura, nos termos do regime legal previsto e já explicitado!

51º

Não obstante, apresentou uma fundamentação, onde se infere que é parecer da Faculdade de Ciências e Tecnologia da Universidade de Coimbra, que *considera que deve ser atribuído o*

reconhecimento de habilitações ao nível de licenciatura em Engenharia Informática, com 16 valores, a Colin Paul Gloster, conforme documento constante a fls. 62 do PA de 2010.

52º

Tal não vale enquanto reconhecimento oficial de grau académico, nos termos legais.

53º

Não obstante, o Painel de Avaliação, mais uma vez, e ao abrigo da prerrogativa já explicitada, nos artigos 21º a 33º da presente contestação,

54º

admitiu e avaliou a candidatura do A.,

55º

sendo que levou em linha de conta o parecer apresentado pelo A, para efeitos de aferição do parâmetro Mérito do Candidato, quando

56º

nada o obrigava, legal ou factualmente,

57º

ou seja poderia a R. não ter considerado o parecer citado, dado que não se trata de um reconhecimento do grau e classificação no quadro legal estipulado, mas antes um parecer, que até a presente data não sabe a R. se colheu ou não!

58º

Seguindo agora a linha de fundamentação do A. não poderia então a R., classificar/avaliar o A. por incompetência absoluta, atribuindo-lhe a nota de 4, derivada da licenciatura com média 16!

59º

Mais se refere que não se trata de uma questão de admissibilidade ao concurso, conforme invoca o A. no seu pedido, mas antes

60º

sendo o A. admitido sempre a concurso (2008 e 2010), apesar de não ser possuidor de reconhecimento de habilitação, não se conformou com o resultado de não concessão da bolsa, por não atingir a classificação mínima de atribuição das mesmas (4 em 2008 e 4,17 em 2011).

61º

Pelo acima exposto fica prejudicada e afastada a contestação ao pedido de indemnização efectuado pelo A., nos termos do nº 3 do art. 3º da Lei nº 67/2007, de 31 de Dezembro.

CONCLUSÕES:

- 1** - O acto administrativo definitivo, consubstanciando na decisão final de não atribuição de bolsa, foi notificado ao A. em **2009/07/20**, conforme documento a fls. 60 do PA.
- 2** - O prazo de impugnação judicial iniciou-se em **2009/09/01**, tendo-se suspendido em férias judiciais, no período ocorrido entre 2009/07/20 (data da notificação da decisão) e 2009/08/31.
- 3** - Assim, o prazo de impugnação judicial terminou em **2009/11/30**, nos termos conjugados da alínea b) do nº 2 do art. 58º e do nº 1 do art. 59º, ambos do CPTA.
- 4** - Dado que a acção em causa foi intentada a **2010/05/09**, mostra-se manifestamente extemporânea, uma vez que foi deduzida para além do prazo disponível para o efeito, que terminou em **2009/11/30**.
- 5** - Tal facto, obsta ao prosseguimento do processo, pelo que ao abrigo da alínea h) do nº 1 do art. 89º do CPTA, deve a presente acção ser rejeitada.

6 – Subsidiariamente,

- 7** - O A. foi opositor em 2008, ao Concurso Público da R. para atribuição de bolsas individuais de doutoramento.
- 8** – Não apresentou o A. reconhecimento legalmente válido da sua habilitação literária, obtida no estrangeiro.
- 9 – Estipula o Guião de Avaliação que o Painel de Avaliação deverá procurar estabelecer uma equivalência entre a classificação obtida pelo candidato e o sistema de classificação em vigor em Portugal.**
- 10 –** Obteve o A., no parâmetro de avaliação Mérito do Candidato, a classificação de 2 em 2008 e de 4 em 2010.
- 11 –** Tais actos não padecem de nulidade, por incompetência absoluta, dado que
- 12 –** Não está em causa, ser a própria R. a conceder equivalência a determinado grau ou a proceder ao reconhecimento de um grau académico superior estrangeiro, incluindo a respectiva classificação final,
- 13 –** mas muito distinta e tão-somente, avaliar através de painel de peritos independentes, para fins exclusivos de concessão de uma bolsa de investigação e em dada situação em concreto, o mérito do candidato,
- 14 –** revelado também em uma habilitação académica obtida no estrangeiro, e ponderado conjuntamente com os outros critérios predefinidos de avaliação de candidaturas.

FCT Fundação para a Ciência e a Tecnologia

PELO QUE E NOS MELHORES DOS DIREITOS

Deverá a presente acção ser considerada improcedente, por não provada, absolvendo-se a R. do pedido de indemnização e de anulabilidade dos actos ora em crise, mantendo-se os mesmos como válidos e eficazes.

O licenciado em Direito designado em representação da entidade requerida,
(art. 11.º, n.º 2, do CPTA):

Sumário

In order to explore the most relevant open issues in gamma-ray astronomy, the GRI (Gamma-Ray Imager) consortium is setting up a new gamma-ray space telescope mission proposal for the ESA Cosmic Vision program. This telescope presents a new concept based on Laue lens technology that focuses gamma rays by using Bragg diffraction in the volume of crystals, dramatically improving sensitivity by a factor of 10 to 100.

In the framework of the GRI mission proposal, a simulation software package based on Geant4 will be developed for the GRI focal plane instrument mass model. The simulation package must provide: different design configurations and dimensions; different types of gamma-ray source objects; accurate hadronic cross sections; an interface with Laue lens simulation data; prompt background noise caused by galactic cosmic ray proton interactions in the instrument; delayed background noise caused by material activation; diffuse cosmic X-ray background noise; and an event reconstruction package.

2d.

Estado da Arte:

INTEGRAL (INTErnational Gamma-Ray Astrophysics Laboratory) of the European Space Agency (ESA) is the most powerful gamma-ray space telescope ever launched [1,2]. INTEGRAL discovered many phenomena [3]. Focusing gamma-rays would provide high sensitivity and improve the signal to noise ratio, however INTEGRAL does not have any focusing system.

The Gamma-Ray Imager (GRI) mission presented herein stands as an important step in gamma-ray astronomy because GRI is designed to boast a Laue lens together with an optimized CdTe stack instrument which would focus gamma rays and therefore allow zooming and identifying the gamma-ray sources and studying their emission mechanisms [4]. A proof of concept of a Laue lens for gamma-ray astronomy was performed by the French CLAIRE balloon project as mentioned in [14].

Gamma-ray polarimetry had not progressed significantly in astrophysics. In fact, not one dedicated polarimeter has ever been launched as a satellite- nor balloon-borne experiment, despite polarimetric information associated with radiation emissions being an additional parameter that would improve models describing objects like gamma-ray bursts, active galactic nuclei or pulsars. Indeed for those few instruments which are capable of performing polarimetric measurement, polarimetry itself plays a secondary role in the mission schedule, the main purpose of these instruments is generally to perform imaging and timing analysis of celestial sources. This is the case for the COMPTEL (imaging COMPTon TELEscope) instrument on board CGRO (Compton Gamma-Ray Observatory) [5] and the IBIS on board INTEGRAL [6]. The RHESSI satellite included a polarimeter (using a beryllium scatterer between the detection units) but it was designed for solar observations [7].

The POLCA (POLarimetry with Cadmium telluride Array) experiment, carried out at the European Radiation Synchrotron Facility, Grenoble, France, showed that a CdTe polarimeter prototype under an almost 100% polarized beam (100 to 400 keV), is potentially capable of performing polarimetric measurements with the required performances for a space-based mission [8]. An experiment by Kroeger et al. showed the validity of a laboratory polarimeter using diffraction techniques to obtain partially polarized beams, in the framework of the GIPSI (Gamma-ray Instrument for Polarimetry, Spectroscopy, and Imaging) project [9]. GRI would be the first gamma-ray mission where the instrument design will be optimized to perform polarimetric measurements. A minimum detectable polarization of 5% for a 10 mCrab source type for 10E-6 seconds of observation time is expected.

Geant4 is a largely C++-based software library originated from CERN that simulates particle interactions with matter, that has been used in the simulation of the gamma-ray instrument's mass model [11, 13]. MCGPOD is a software package based on the previous GEANT3 (written in FORTRAN) that allows complementary functionalities such as the simulations of cosmic and instrumental backgrounds arising from interactions of the various elements of the instruments and the spacecraft materials [15]. This software will be exported to Geant4 with participation of the applicant. SPENVIS (SPace ENVironment Information System) is another relevant software suite for space astrophysics that simulates effects of space environments on a spacecraft. SPENVIS was developed by the Belgian Institute for Space Aeronomy under ESA supervision.

Objectivos:

The Gamma-Ray Imager (GRI) mission would explore fundamental questions of modern astrophysics related to the non-thermal Universe revealed by the gamma-ray energy band. Its novel gamma-ray focusing based on Laue lens technology would result in a more sensitive (10 to 100 times) gamma-ray instrument than on orbit today.

The Grupo de Instrumentação Atómica e Nuclear task is to develop the Laue lens focal plane instrument based on a CdTe stack detector. The task of the applicant is to develop simulation software, to be presented as part of the GRI mission proposal to ESA in circa 2011. This software is for the optimization of the CdTe focal plane instrument. It should reproduce an almost realistic response in the space environment.

The applicant must include prompt background noise due to galactic cosmic ray proton interactions in the instrument; delayed background noise due to material activation; and the diffuse cosmic X-ray background.

The applicant must determine the simulated background noise to decide the shielding required and because the inclusion of background noise in the simulation software is fundamental for the mass model simulation results to approach those that are expected to be obtained in a real space mission, since the overall background noise is in general much higher than the detected source emission flux.

The applicant shall develop associated Compton event reconstruction software which would be an important tool to select between incoming events from the gamma-ray astronomical source and the background noise.

The simulation package will have accurate radiation interaction with matter and nuclear physics. Necessary experiments for the hadronic cross section validation shall be performed at the Cyclotron Research Centre facilities in Louvain-la-Neuve, Belgium.

The software package will be developed during the whole thesis time scale while the experimental tests will be performed by the second semester of the second year.

3d.

Descrição Detalhada:

Several open issues in gamma-ray astronomy are still poorly known and understood, such as non-thermal mechanisms in supernova remnants, the high energy active galactic nuclei spectra cut-off, the detection of nuclear and annihilation lines and the gamma-ray polarization levels of emission sources like pulsars, gamma-ray bursts, solar flares, and black holes. In order to explore these astronomical issues the GRI (Gamma-Ray Imager) consortium proposes a new space telescope mission for the ESA (European Space Agency) Cosmic Vision 2015-2025 program - missions to be launched between 2015 and 2025 (fig. 1). ESA recognizes the importance of this mission (

<HTTP://sci.esa.int/science-e/www/object/index.cfm?fobjectid=36959>

) due to its novel gamma-ray focusing concept based on Laue lens technology, since this would be the first space-based mission that will allow gamma-ray focusing in a broad energy band-pass (60-1000 keV). So far this energy range has been observed exclusively by using traditional collimated and/or coded mask instrumentation, which limits the telescope sensitivity. The GRI Laue lens focusing optics are potentially capable of improving detection sensitivity by a factor of 10 to 100 with respect to the past and ongoing gamma-ray space observatories. An important feature of GRI is sensitivity to polarization since it will be the first instrument conceived intentionally to perform this kind of measurement, its importance was confirmed in papers such as [15] and [19].

The GIAN (Grupo de Instrumentação Atómica e Nuclear), where this working programme will be conducted, is a GRI consortium member. Its main contribution to the mission is to develop the Laue lens focal plane instrument based on a CdTe stack detector (fig. 2). The performance of this instrument must meet the requirements established by the consortium: gamma-ray detection sensibility of 10^{-7} photons/(cm².s.keV), energy resolution of approximately 3%, and minimum detectable polarization lower than 5% for a 10 mCrab gamma-ray source equivalent, for 10^6 s observation times. The expected instrument mass model simulation results should fit these requirements. Furthermore, the instrument material and design must meet the exigent technical requirements of a space-based mission (vibrations, extreme temperatures, limited power consumption, etc.).

The research activities of the candidate consist of the optimization of the CdTe focal plane instrument in the framework of the Gamma-Ray Imager consortium by building a Monte Carlo simulation package capable of reproducing a nearly realistic response in the space environment. So far, the GIAN performed previous theoretical studies by means of a simulation code based on the Geant4 toolkit from CERN concerning the potential performances of CdTe instruments for different design configurations and dimensions, for different types of gamma-ray emissions (monochromatic beams, the Crab Nebula, gamma-ray bursts, etc.) and for different levels of photon beam polarization [11,13]. The aforementioned earlier simulation studies were partially experimentally verified through a set of CdTe matrix prototype experiments performed at the ERSF (European Radiation Synchrotron Facility), Grenoble, France, where these devices were tested under approximately 100% polarized monochromatic beams in the energy range 100-750 keV [12]. However, new and essential functionalities, that will be objectives of this research programme, must still be implemented in the instrument simulation mass model such as: interfacing with Laue lens simulation data, prompt background noise caused by galactic cosmic ray proton interactions in the instrument, delayed background noise caused by material activation, diffuse cosmic X-ray background noise and a Compton event reconstruction package. Through a collaborative work with the University of Ferrara, Italy, which has been developing the most recent Laue lens technology, the response of the Laue lens system to typical gamma-ray sources' emissions and the respective point spread function in the instrument detection plane as a function of the photons' energy will be implemented in the simulation model. Compton event reconstruction is an important tool to select between incoming events from a gamma-ray astronomical source and the background noise.

The inclusion of background noise in the simulation software is fundamental for the mass model simulation results to approach those that are expected to be obtained in a real space mission, since the overall background noise flux is in general much higher than the detected source emission flux. A planned sensitivity analysis of background noise levels in different orbits' radiation environments was mentioned in [16, Section 4 Conclusion]. The applicant used the SPace ENVironment Information System (SPENVIS) suite of radiation modeling software of ESA developed by the Belgian Institute for Space Aeronomy for his secondary degree [17,18].

In order to simulate accurately the nuclear processes involving proton interactions and material activation, it will be necessary to verify experimentally several Geant4 hadronic cross sections. The collaboration that has been established between the GIAN and the Center for Space Radiations based in the Cyclotron Research Centre facilities in Louvain-la-Neuve, Belgium, will permit access to its facilities in order to perform some necessary experiments for hadronic cross section validation.

Furthermore, the applicant will contribute to the improvement of the Geant4 toolkit, in particular to its maintainability deficiencies. The applicant already examined a significant part of Geant4 internal files (2007 release) and listed a number of major observed problems relating to: using the C++ preprocessor, pointers [20], conditional statements instead of dispatching, copying and pasting instead of arrays, postincrementing instead of preincrementing, independence where dependence is intrinsic, alternative names for the same action, redundant replications of defaults, a hard-coded constant magic number, or unused parameters.

This simulation software will be constantly upgraded in order to fit the mission conditions as closely as possible, when new concepts and new ideas will be incorporated in the instrument project by the theoretical and experimental members of the GRI consortium.

Actividades anteriores e situação actual em termos científicos e/ou profissionais:

Período	Cargo ou Categoria	Instituição
1st March 2005 - 31st August 2005	Intern. I had developed some of the software which had been planned to be on board the Young Engineers' Satellite 2. See WWW.YES2.info and HTTP://StreamISS.SpaceFlight.ESA.int/?pg=production&dm=1&PID=yes2 .	The European Space Technology and research Centre (ESTEC (ESTEC is not an acronym)) of the European Space Agency, Keplerlaan 1, Postbus 299, 2200 AG Noordwijk ZH, The Netherlands.
4th February 2005 - 28th February 2005	Volunteer. I had developed some of the software which had been planned to be on board the Young Engineers' Satellite 2. See WWW.YES2.info and HTTP://StreamISS.SpaceFlight.ESA.int/?pg=production&dm=1&PID=yes2 .	Delta-Utec Space Research & Consultancy, Middelsteegraad 89g, 2312 TT Leiden, The Netherlands.

7d.

28th May 2001 - 28th September 2001	Student trainee. It was my job to come up with suggestions for improving the processes of modifying software onboard satellites to the OnBoard Data Handling systems; and increasing the ability to understand what the software is doing.	European Space Operations Centre of the European Space Agency, Robert-Bosch-Strasse 5, 64293 Darmstadt, Germany.
12th June 2000 - 29th September 2000	Intern. I was using C and OPNET 6.0.L to develop simulation models of Internet delivery over satellite, via piggybacking on DVB (Digital Video Broadcasting).	Satellite Systems, British Telecom, Adastral Park, Martlesham Heath, Ipswich IP5 3RE, Suffolk, England.
9th - 15th June 1998	Assistant in State pre-university examinations.	Pobalscoil Rosmini, Gracepark Road, Drumcondra, Dublin 9, Republic of Ireland.
Both semesters of the academic year 2000-2001.	Tutoring first year students in simple Java and x86 machine code and assembly language programming.	School of Computer Applications (that school has since been replaced by the School of Computing), Dublin City University, Dublin 9, Republic of Ireland.
4 days in September 1995.	Worked in a local bookshop while a local school reopened (my nonlocal school reopened later).	The bookshop had been independent and called Fax & Fiction and has since joined a franchise so has been replaced by Eason, Unit 2E Killegland Court, New Ashbourne Town Centre, Ashbourne, Co. Meath, Republic of Ireland.
3rd - 14th March 1997	Work experience student with Amnesty International.	The Irish Section of Amnesty International, which has moved to Amnesty International Irish Section, First Floor, Ballast House, 18-21 Westmoreland Street, Dublin 2, Republic of Ireland.
20th - 25th July 1998	Work experience student. Computer modeling and analysis (using the software package Satellite Toolkit and the book Maral and Bousquet, "Satellite Communications Systems") of the satellite constellations of two (then) forthcoming mobile phone services.	Satellite Planning division, British Telecom, Angel Centre, 403 St. John Street, London EC1V 4PL, England.
23rd October 1999 - 19th December 1999	Weekend contractor at a 3Com Technologies factory. Factory assembly line producing networking cards.	I worked at a 3Com factory but I was actually employed by the Richmond Recruitment agency. The agency is currently located at Richmond Recruitment, 83 Merrion Square, Dublin 2, Republic of Ireland.
5th July 1999 - 27th August 1999	Student in the Satellite Operations Planning & Investments division and the Satellite Planning division of British Telecom. I created two internal intranet websites that described these two satellite divisions' operations and functions within BT.	British Telecom, Angel Centre, 403 St. John Street, London EC1V 4PL, England.
1st January 2006 - 9th September 2007	PhD student. I had applied to Pisa to for space research. I was warned that the first year would not focus on space but it was possible a space project would start later. Sadly this has not happened so I have quit to earn a PhD in space elsewhere.	Information Engineering Department: Electronics, Computer Engineering, Telecommunications, University of Pisa, Via G. Caruso 16, 56122 Pisa, Italy.
Summer 2008. Freelance.	Subcontractor to the company Zelinda which "specializes in the design of communications equipment for the space industry". I was based offsite via the Internet.	I have never visited the premises of the client. The client is based at Zelinda Ireland Ltd., Daisybank House, Powers Hill, Cheekpoint, Co. Waterford, Republic of Ireland.
June 2008 to the present.	Investigador bolsheiro no âmbito do projeto PTDC/CTE-SPA/65803/2006, no Centro de Instrumento do Departamento de Física da Universidade de Coimbra.	Grupo de Instrumentação Atómica e Nuclear, Departamento de Física, Universidade de Coimbra, Rua Larga, 3004-516 Coimbra, Portugal.

Área de actividade científica

I used to be involved with research for on-chip networking in the largest University of Pisa in Italy. I had applied to the largest University of Pisa in 2005 in order to conduct research relevant to space, and I was accepted by a researcher who had had several years' experience specific to space. He had warned me before I began that the first year (i.e. 2006) would not be so specific to space but that it was quite possible that I would be permitted to conduct research specific to space after the first year if a project became available. Unfortunately this has not happened and I have quit that position to try to become a Ph.D. student concentrating on space at another university.

I was accepted in the original University of Coimbra for a project in gamma-ray astronomy so I moved from Italy to Portugal. I apply to FCT for funding for the tuition fees such that I may officially enrol as a Ph.D. student in Coimbra.

Several open issues in gamma-ray astronomy are still poorly known and understood, such as non-thermal mechanisms in supernova remnants, the high energy active galactic nuclei spectra cut-off, the detection of nuclear and annihilation lines and the gamma-ray polarization levels of emission sources including: pulsars, gamma-ray bursts, solar flares, and black holes. In order to explore these astronomical issues the GRI (Gamma-Ray Imager) consortium proposes a new space telescope mission for the ESA (European Space Agency) Cosmic Vision 2015-2025 program - missions to be launched between 2015 and 2025 (fig. 1). ESA recognizes the importance of this mission (

<HTTP://sci.ESA.int/science-e/www/object/index.cfm?fobjectid=36959>

) due to its novel gamma-ray focusing concept based on Laue lens technology, since this would be the first space-based mission that will allow gamma-ray focusing in a broad energy band-pass (60-1000 keV). So far this energy range has been observed exclusively by using traditional collimated and/or coded mask instrumentation, which limits the telescope sensitivity. For instance, the IBIS telescope on board the ongoing ESA gamma-ray mission, INTEGRAL (INTERNATIONAL Gamma-Ray Astrophysics Laboratory), is equipped with a coded mask. Although INTEGRAL has offered the best gamma-ray Universe observations so far, the GRI Laue lens focusing optics are potentially capable of improving detection sensitivity by a factor of 10 to 100.

The CI (Centro de Instrumentação), where this activity will be conducted, is a GRI consortium member. Its main contribution to the mission is to develop the Laue lens focal plane instrument based on a CdTe stack detector (fig. 2). The performances of this instrument must meet the requirements established by the consortium: gamma-ray detection sensibility of 10 to the power of -7 photons/(cm squared second keV), energy resolution of approximately 3%, and minimum detectable polarization lower than 5% for a 10 mCrab gamma-ray source equivalent, for 10 to the power of -6 second observation times. The expected instrument mass model simulation results should fit these requirements. Furthermore, the instrument material and design must meet the exigent technical requirements of a space-based mission (vibrations, extreme temperatures, limited power consumption, etc.).

This activity consists of the optimization of the CdTe focal plane instrument in the framework of the Gamma-Ray Imager consortium by writing Monte Carlo simulation software capable of reproducing a response which approaches reality in the space environment. So far, previous theoretical studies were performed by means of Monte Carlo simulations based on the Geant4 toolkit from CERN concerning the potential performances of CdTe instruments for different design configurations and dimensions, for different types of gamma-ray emissions (monochromatic beams, the Crab Nebula, gamma-ray bursts, etc.) and for different levels of photon beam polarization [11,13,14].

An important feature of GRI is sensitivity to polarization which is not properly detectable by currently deployed instruments. Its importance was confirmed in papers such as [15] and in August 2008 in the journal "Science", which caught the attention of ESA [19].

The applicant examined all of the examples for novices supplied with a version of Geant4 released in 2007, and examined over 150 of the internal files of the Geant4 library itself. The conclusion is that how Geant4 is implemented is not good with respect to the elite of software engineering. The criticisms do not pertain to the quality of the simulations nor bugs nor slowness but instead concern maintainability. A selection of the observed problems can be categorized as relating to:

using the C++ preprocessor,

pointers [20],

conditional statements instead of dispatching,

copying and pasting instead of arrays,

postincrementing instead of preincrementing,

independence where dependence is intrinsic,

alternative names for the same action,

redundant replications of defaults,

a hard-coded constant magic number,

or

unused parameters. Claims such as

"Geant4 adopts object-oriented technology"

in [10, Page 270] are exaggerations.

The aforementioned earlier simulation studies were partially experimentally verified through a set of CdTe matrix prototype experiments performed at the ESRF (European Radiation Synchrotron Facility), Grenoble, France, where these devices were tested under approximately 100% polarized monochromatic beams in the energy range 100-750 keV [12]. However, new and essential functionalities must still be implemented in the instrument simulation mass model such as: interfacing with Laue lens simulation data, prompt background noise caused by galactic cosmic ray proton interactions in the instrument, delayed background noise caused by material activation, diffuse cosmic X-ray background noise, and a Compton event reconstruction package. Through a collaborative work with the University of Ferrara, Italy, which has been developing the most recent Laue lens technology, the response of the Laue lens system to typical gamma-ray sources' emissions and the respective point spread function in the instrument detection plane as a function of the photons' energy will be implemented in the simulation model. Compton event reconstruction is an important tool to select between incoming events from a gamma-ray astronomical source and the background noise.

The inclusion of background noise in the simulation software is fundamental to approach the mass model simulation results to those that are expected to be obtained in a real space mission, because the overall background noise flux is in general much higher than the detected source emission flux. A planned sensitivity analysis of background noise levels in different orbits' radiation environments was mentioned in [16, Section 4 Conclusion]. The applicant used the SSpace ENVironment Information System (SPENVIS) suite of radiation modeling software of ESA developed by the Belgian Institute for Space Aeronomy for his secondary degree [17,18].

In order to simulate accurately the nuclear processes involving proton interactions and material activation, it will be necessary to verify experimentally several Geant4 hadronic cross sections. The collaboration that has been established between the Centro de Instrumentação and the Center for Space Radiations based in the Cyclotron Research Centre facilities in Louvain-la-Neuve, Belgium, will permit access to its facilities in order to perform some necessary experiments for the hadronic cross section validation.

This simulation software will be constantly upgraded in order to fit the mission conditions as closely as possible, when new concepts and

9d

new ideas will be incorporated in the instrument project by the theoretical and experimental members of the GRI consortium.

Área de actividade científica (Domínio de especialização, investigação e outras competências/actividades)

Domínio de especialização

I have and do still specialize in information technology (computer science and electronic engineering) for space. I have used the formal specification languages PVS, Z, and VDM. PVS is the best of these three by far. My preferred hardware description language is VHDL. I have used the imperative programming language Ada. I had been originally inspired to learn Ada because of its importance in the field of aeronautics. I have also used many other imperative languages. I have also used a logic language and a number of functional languages but I would not say that I have specialized in them. I used to be involved in research for on-chip networking, but this plays no role in my current research.

Actuais interesses de investigação

I am interested in effects of the space environment on artificial satellites and space probes. Particular emphasis had been placed on the effects of particles on computer memories and computer registers, but now my current research effort is concentrated on a different aspect of these nuisances: i.e. the noise in sensor readings caused by unwanted particles. My interest in nuisance particles is part of a broader interest in space weather. My interest in space weather is part of a broader interest in space and particles. Instead of currently being involved with development of intellectual property embedded in a spacecraft near the end of its development, I am currently involved in the early design stage of a mission by being responsible for simulating and optimizing many crucial aspects of an instrument for a gamma-ray telescope which is proposed to be launched.

Outras competências/actividades

I had joined the European Students' Earth Orbiter project of the Student Space Exploration & Technology Initiative in 2001. After my primary degree I joined the Narrow Angle Camera payload team but during my primary degree I had been in the On-Board Data Handling platform team. I am a member of Ada Deutschland, Ada-Europe, the Association for Computing Machinery (ACM) and its Special Interest Group on the Ada programming language. I am a member of the Association of C & C++ Users. I post to Usenet. I attended: Astronomy and Astrophysics in Ireland (2004), DASIA (Data Systems In Aerospace) 2003, 3rd European Quantum Information Processing & Communication Workshop(2002), DASIA2002, BABEL '01 Workshop on Multi-Language Infrastructure and Interoperability, Huygens Probe On-Board Software 4th Training Workshop, Quantum Computers and Quantum Chaos(2001), International Conference for Physics Students 2000, and International Conference on Software Engineering 2000.

Experiência na orientação

I have no experience as a scientific adviser. I have tutored first year undergraduate students on how to program.

Participação em Projectos

I am currently involved in an international project for the Gamma-Ray Imager (GRI). I am funded by a Portuguese fellowship (i.e. PTDC/CTE-SPA/65803/2006 - "CdTe Focal Plane for a Laue Lens Gamma-ray Space Telescope").

I used to be involved in an international project of the European Commission called SHAPES (Scalable software Hardware Architecture Platform for Embedded Systems).

Prémios e distinções

Book review of James Bao-Yen Tsui, "Fundamentals of Global Positioning System Receivers: A Software Approach" published by the Association of C & C++ Users in the April 2008 issue of its journal "CVu" available to subscribers at

<HTTP://ACCU.org/var/uploads/journals/cvu202.pdf>

Various Usenet posts and/or emails of mine have been partially reproduced in the following issues of "Ada User Journal": March 2002; September 2002; December 2002; September 2003; December 2003; and September 2006.

Letter in "The Irish Times" newspaper, July 1st, 1998 edition,

<WWW.IrishTimes.com/newspaper/letters/1998/0701/98070100113.html>

, on that webpage it is incorrectly indicated "07 Jul 1998", the title in the hardcopy was "SOLAR POWER SATELLITES" but that title was replaced by "Solar Energy" on the website.

Dados para a Candidatura: SFRH/BD/46372/2008 (Bolsa de Doutoramento)				
Nome do Investigador:	Nicholas Collin Paul Gloucester			
Domínio Científico:	Física			
Curriculum vitae do Orientador: Maria Filomena de Osorio Pinto dos Santos				
Identificação do Investigador:				
Nome Completo:	Maria Filomena de Osório Pinto dos Santos			
Número de Identificação Fiscal (NIF):	152587390			
Data de nascimento:	05-12-1959	Naturalidade (concelho):	Coimbra	
Sexo:	Documento de Identificação:	Data Emissão:	Arquivo:	
F	4236577	-		
País Nacionalidade:	Portugal			
Morada:	n/a			
Código-postal:	n/a	Localidade:	n/a	
País Residência:	n/a			
Telefone (casa):	Telefone (emprego):	Telemóvel:	E-mail Contacto:	
239410665	239410665		Filomena@gian.fis.uc.pt	
Habilidades Académicas do Investigador				
Ano	Grau	Domínio científico	Designação do Curso	N.Anos
2005	AGREGAÇÃO	Física		
Título da Tese (se aplicável):				
Instituição (Atrib. Grau): Faculdade de Ciências e Tecnologia . Universidade de Coimbra				
Classificação: Maioria				
Ano	Grau	Domínio científico	Designação do Curso	N.Anos
1995	DOUTORAMENTO			
Título da Tese (se aplicável):				
Instituição (Atrib. Grau): Faculdade de Ciências e Tecnologia . Universidade de Coimbra				
Classificação: Distinção e Louvor				
Actividades anteriores e situação actual em termos científicos e/ou profissionais:				
Período	Cargo ou Categoria	Instituição		
1985-1995	assistente	Faculdade de Ciências e Tecnologia- Universidade de Coimbra		
1995-2000	Prof. Auxiliar	Faculdade de Ciências e Tecnologia- Universidade de Coimbra		
2000-	Prof. Auxiliar (nomeação definitiva)	Faculdade de Ciências e Tecnologia- Universidade de Coimbra		
Área de actividade científica				
O interesse científico tem-se desenvolvido na área de Física Aplicada. Concretamente tem sido estudados os processos físicos envolvidos na detecção de raios x de baixa energia em meios gasosos. O trabalho tem sido desenvolvido sobretudo através de simulação pelo método de Monte Carlo, embora possuindo uma pequena componente experimental e visa quer a investigação de características fundamentais da interacção de fotões e electrões em meios gasosos - gases raros e suas misturas, quer da aplicação ao estudo e optimização de detectores do tipo Contador Gasoso de Cintilação Proporcional e Contador Proporcional. Outra área abordada é a simulação da emissão de fotocátodos em atmosfera de gás raro e suas misturas na presença de um campo eléctrico, em função da energia dos fotões incidentes.				
Área de actividade científica (Domínio de especialização, investigação e outras competências/actividades)				
Domínio de especialização				
Instrumentação Atómica e Nuclear. Transporte de radiação em gases.				
Actuais interesses de investigação				

Estudo dos fenómenos relacionados com o transporte de radiação em meios gasosos tendo em vista a optimização de detectores gasosos do tipo contador proporcional e contador gasoso de cintilação proporcional.

Aplicação do método de Monte Carlo ao transporte de radiação em meios gasosos.

Estudos experimentais baseados em detectores gasosos.

Misturas de gases nobre como meio de detecção de radiação.

Detectores com multiplicação - técnicas para melhorar a resolução em energia.

Microestruturas - desenvolvimento, simulação e estudo experimental de microestruturas. Performance de microestruturas em misturas gasosas. Interpretação dos fenómenos envolvidos.

Outras competências/actividades

Física Atómica e Molecular.

Experiência na orientação

Seminário de licenciatura

97-98 Francisco Lemos

Tese de Doutoramento

Co-orientação do trabalho conducente à tese intitulada
"Estudo Detectores de radiação X de baixa energia baseados em misturas de Xenon e Neon?",
apresentada pela lic. e mestre Filipa Isabel Gouveia de Melo Borges Belo Soares na Universidade de Coimbra em Dezembro de 2003

Orientação de Projecto de licenciatura em Engª Física

Fernando Amaro 2003-2004

Orientação de Projecto de licenciatura em Engª Física

Liliana P.M.M. Carita 2005-2006

Participação em Projectos

Coordenação de Projectos Científicos.

"Técnicas para melhorar a resolução em energia em detectores gasosos de radiação com ionização"

Projecto POCI/FP/63409/2005. Projecto em curso cujo início foi em 10/2005

"Estudo de misturas de gases nobres para contadores proporcionais"

Projecto CERN/FAT/43783/2001 projecto de 2 anos, em que o financiamento do 2º ano foi condicionado à aprovação de um relatório de progresso. Este projecto, que entretanto passou a ter a designação de POCTI/FAT/43783/2002, terminou em Dezembro de 2004.

"Técnicas para melhorar a resolução em energia em detectores gasosos de radiação com ionização"

POCI/FP/63409/2005

"Técnicas para melhorar a resolução em energia em detectores gasosos de radiação com ionização II"

POCI/FP/63934/2005

"Detectores gasosos com multiplicação"

PTDC/FIS/64687/2006

Participação em Projectos Científicos.

- Projecto CERN/S/NC/141/94 "Espectrometria de raios X em processos solares de alta energia"

- Projecto PEDIC/S/SIS/1853/94 "Microfitas"

- Projecto Praxis/3/31/CTAE/1920/95 "Detectores e processos físicos na análise de asteróides".

- Projecto CERN/C/FIS/1085/96 "Espectrometria de raios X em processos solares de alta energia"

- Projecto CERN/P/FAE/1163/97 "Processos físicos em detectores de microfitas"

- Projecto CERN/P/FIS/1166/97 "Processo físico na interacção de raios delta em detectores gasosos: simulação e desenvolvimento experimental."

- Projecto CERN/P/FIS/1200/98 "Processos físicos em detectores de microfitas II"

- Projecto PRAXIS/P/FIS/13140/1998 "Detectores de raios X para espectroscopia de hidrogénio muónico sob a influência de campos magnéticos intensos"

- Projecto CERN/P/FIS/15193/1999 "Processo físico na interacção de raios delta em detectores gasosos: simulação e desenvolvimento experimental II."

- Projecto CERN/P/FIS/15201/1999 "Processos Físicos em detectores de microfitas III".

- Projecto POCI/FP/63429/2005 "Desenvolvimento de novos fotosensores gasosos baseados em microestruturas"

- Projecto POCI/FP/63430/2005 "Iões positivos e processos físicos em detectores gasosos - II"

- Projecto POCI/FP/63898/2005 "Iões Positivos e Processos Físicos em Detectores Gasosos - III"

- Projecto POCI/FP/81918/2007 "Desenvolvimento de técnicas para detectores de radiação X de baixa energia"

- Projecto POCI/FP/81929/2007 "Absorção de Raios-X polarizados em Gases nobres

150
6/22/11 1:12 PM

- Projecto PTDC/CTE-SPA/65803/2006 "Plano focal de CdTe para telescópio espacial de raios gama equipado de lentes de Laue"

- "The electroluminescence of Xe-Ne gaseous mixtures: a Monte Carlo simulation study"

F.P Santos, T.H.V.T.Dias, P.J.B.M.Rachinhas, A.D.Stauffer and C.A.N.Conde
 Conference Record of 1996 IEEE Nuclear Science Symposium & Medical Image Conference (3-9 November 1996, Anaheim, California, USA), 2(1997)754-57.

- "The Effect of Electron Multiplication in the Electroluminescence Yield of pure Xe and Xe-Ne Mixtures: Gas Proportional Scintillation Counter and Simulation Results"

T.H.V.T.Dias, F.P.Santos, P.J.B.M.Rachinhas, F.I.G.M.Borges, J.M.F. dos Santos, A.D.Stauffer, C.A.N.Conde
Conference Record of 1997 IEEE Nuclear Science Symposium & Medical Image Conference (9-15 November 1997, Albuquerque, NM, USA) 1(1998)447-451.

- "The Response of a Gas Proportional Scintillation Counter to Conversion Electrons: Simulation and Experimental Results"

T.H.V.T.Dias, P.J.B.M.Rachinhas, J.A.M.Lopes, P.C.P.S.Simões, R.E.Morgado, J.M.F.dos Santos, F.P.Santos, A.D.Stauffer, C.A.N.Conde
Conference Record of 1997 IEEE Nuclear Science Symposium & Medical Image Conference (9-15 November 1997, Albuquerque, NM, USA) 1(1998)444-446.

- "Operation of gas proportional scintillation counters in a low charge multiplication regime"

F.I.G.M.Borges, J.M.F.dos Santos, T.H.V.T.Dias, F.P.Santos, P.J.B.M.Rachinhas, C.A.N.Conde
Presented at 1998 Symposium on Radiation Measurements and Applications (12-14 May 1998, Ann Arbor, Michigan USA)

- "Asymmetry effects in the full-energy X-ray spectra in xenon: a Monte Carlo simulation study"

T.H.V.T.Dias, P.J.B.M.Rachinhas, F.P.Santos, C.A.N.Conde and A.D.Stauffer
Presented at 1998 Annual Meeting of the Division of Atomic and Molecular and Optical Physics-DAMOP98 (27-30 May 1998 Santa Fé, NM, USA).

- "Conversion electron detection with gas proportional scintillation counters"

P.J.B.M.Rachinhas, P.C.P.S.Simões, J.A.M.Lopes, T.H.V.T.Dias, R.E.Morgado, J.M.F.dos Santos, F.P.Santos, J.F.C.A.Veloso, A.D.Stauffer, C.A.N.Conde
Presented at 1998 Symposium on Radiation Measurements and Applications (12-14 May 1998, Ann Arbor, Michigan USA)

- "The w-value and the Fano factor of xenon-neon gas mixtures: a Monte Carlo simulation study"

F.P.Santos, T.H.V.T.Dias, P.J.B.M.Rachinhas, C.A.N.Conde, A.D.Stauffer
Conference Record of IEEE Nuclear Science Symposium & Medical Image Conference (8-13 November 1998, Toronto, Canada) 1999

- "Absorption of electrons in xenon for energies up to 300 keV: a Monte Carlo simulation study"

P.J.B.M.Rachinhas, T.H.V.T.Dias, F.P.Santos, C.A.N.Conde, A.D.Stauffer
Conference Record of IEEE Nuclear Science Symposium & Medical Image Conference (8-13 November 1998, Toronto, Canada) 1999

- "A Monte Carlo simulation study of the electron cloud produced in xenon by electrons with energies up to 200keV"

P.J.B.M.Rachinhas, T.H.V.T.Dias, F.P.Santos, C.A.N.Conde, A.D.Stauffer
Presented at ICPEAC'99 - XXI International Conference on the Physics of Electronic and Atomic Collisions, July 22-27, Sendai, Japan

- "Photoelectron collection efficiency in a xenon atmosphere: a Monte Carlo study"

P.J.B.M.Rachinhas, J.A.M.Lopes, T.H.V.T.Dias, F.P.Santos, C.A.N.Conde and A.D.Stauffer
Conference Record of 1999 IEEE Nuclear Science Symposium & Medical Image Conference (24-30 October 1999, Seattle, USA) ??????

- "Simulation of X-ray tubes for imaging applications"

L.M.N.Távora, E.J.Morton, F.P.Santos, and T.H.V.T.Dias
Conference Record of 1999 IEEE Nuclear Science Symposium & Medical Image Conference (24-30 October 1999, Seattle, USA) Vols 1-3, 448-454 1999

- "Quenching of the Scintillation of Xe-Ne Mixtures: a Monte Carlo Study."

F.P. Santos, T.H.V.T. Dias, P.J.B.M. Rachinhas, L.M.N. Távora, C.A.N. Conde, and A.D. Stauffer.
MC 2000 - International Conference on Advanced Monte Carlo for Radiation Physics, Particle Simulation and Applications, 23 - 26 Oct 2000, Instituto Superior Técnico, Lisboa, Portugal.

Book of Abstracts, L. Oliveira and A. Kling eds., Instituto de Tecnologia Nuclear, Lisboa p. 159 160, 2000.
Conference Proceedings: M. Nakagawa, P. Vaz, F. Barão, A. Kling, and L. Távora eds., Springer Verlag, Heidelberg, 2001, in press

- "Photoelectron Collection Efficiency in Rare Gases: A Monte Carlo Study."

P.J.B.M. Rachinhas, J.A.M. Lopes, T.H.V.T. Dias, F.P. Santos, C.A.N. Conde, and A.D. Stauffer.
MC 2000 - International Conference on Advanced Monte Carlo for Radiation Physics, Particle Simulation and Applications, 23 - 26 Oct 2000, Instituto Superior Técnico, Lisboa, Portugal.

Book of Abstracts, L. Oliveira and A. Kling eds., Instituto de Tecnologia Nuclear, Lisboa, p. 157 158, 2000.
Conference Proceedings: M. Nakagawa, P. Vaz, F. Barão, A. Kling, and L. Távora eds., Springer Verlag, Heidelberg, 2001, in press.

- "The energy resolution of Xenon-Neon filled gas proportional-scintillation counters for x-rays below 2keV".

F.I.G.M.Borges, F.P.Santos, T.H.V.T.Dias, P.J.B.M. Rachinhas, C.A.N. Conde, A.D.Stauffer.
Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 4-10 November 2001, San Diego, CA, U.S.A. Conference Record, John Valentine ed., p 294-297, 2001.

Conference Record???

- "A simulation study of the electroluminescence yield of xenon and xenon-neon mixtures contaminated by water vapor."

*F.P.Santos, T.H.V.T.Dias, L.M.N.Távora, P.J.B.M.Rachinhas, C.A.N.Conde, A.D.Stauffer
Presented at the 10th Symposium on Radiation Measurements and Applications, May 21-23, 2002, University of Michigan, Ann Arbor, MI

- "An experimental investigation of the M-discontinuities in the response of xenon gas detectors to x-rays in the 0.1 to 2 keV range"

Presented at the 10th Symposium on Radiation Measurements and Applications, May 21-23, 2002, University of Michigan, Ann Arbor, MI

- "The performance of a gas proportional-scintillation counter for x-ray spectrometry in the 0.1-3 keV range"

F.I.G.M.Borges, J.M.F.dos Santos, T.H.V.T.Dias, F.P.Santos, C.A.N.Conde
5th International Topical Meeting on Industrial Radiation and Radioisotope Measurement Applications, IRRMA-V Bologna, Italy, 9-14 June 2002

- "Xenon-Neon gas proportional-scintillation counters for x-rays below 2 keV: experimental results."

F.I.G.M.Borges, F.P.Santos, J.M.F.Santos, T.H.V.T.Dias, P.J.B.M.Rachinhas, C.A.N.Conde

Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 10-16 Nov.2002, Norfolk, VA
Conference Record ????????????

- "Dependence of the photoelectron collection efficiency in noble gases on the incident VUV photon energy"
P.J.B.M.Rachinhas, T.H.V.T.Dias, J.A.M.Lopes, F.P.Santos, L.M.N.Távora,C.A.N.Conde, A.D.Stauffer
Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 10-16 Nov.2002, Norfolk, VA

- "Intrinsic limitations in the energy resolution of drift-field based radiation detectors: a Monte Carlo simulation study of Xe-filled counters"
L.M.N. Távora, C.A.N. Conde, F.P. Santos, T.H.V.T. Dias, P.J.B.M. Rachinhas
Presented at 9th International Symposium on Radiation Physics (ISRP-9) Cape Town, South Africa, 24-31 October 2003

- "Monte Carlo simulation study of the characteristics of Xe-Ne gas mixtures as detection media in gas proportional ionization counters"
F. P. Santos, P. J. B. M. Rachinhas, T. H. V. T. Dias, F. I. G. M. Borges, A. D. Stauffer and C. A. N. Conde
Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 16-22 October 2004, Rome

- "Experimental Study of Xe-Ne Proportional Counters for X-Ray Detection"
F. I. G. M. Borges, F. P. Santos, F. Amaro, T. H. V. T. Dias, J. F. C. A. Veloso, and C. A. N. Conde
Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 16-22 October 2004, Rome

- "A Monte Carlo Study of Backscattering Effects in the Photoelectron Emission from a CsI Photocathode into Ar-CH₄ mixtures"
J. Escada, J.B.M. Rachinhas, T.H.V.T. Dias, J.A.M. Lopes, F.P. Santos, C.A.N.Conde
Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 16-22 October 2004, Rome

- "Photoelectron Collection Efficiency in Mixtures of Noble Gases with CF_{4"}
J. Escada, P.J.B.M.Rachinhas, T.H.V.T.Dias, F.P.Santos, J.A.M.Lopes, C.A.N.conde, A.D.Stauffer
Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 29 Oct.-4 Nov. 2006

- "A new dual anode microstrip plate chamber for x-rays: experimental results".
L.P.M.M.Carita,S.C.do Carmo, F.P.Santos, C.A.N.Conde
Presented at IEEE Nuclear Science Symposium & Medical Image Conference, 29 Oct.-4 Nov. 2006

FCT - Avaliação de Candidaturas Concurso para a atribuição de Bolsas Individuais 2008 | Print: 22-06-2011 13:06:36

202.

Dados para a Candidatura: SFRH/BD/46372/2008 (Bolsa de Doutoramento)

Nome do Investigador: Nicholas Collin Paul Gloucester

Domínio Científico: Física

Curriculum vitae do Orientador: Rui Miguel Curado da Silva

Identificação do Investigador:

Nome Completo:	Rui Miguel Curado da Silva		
Número de Identificação Fiscal (NIF):	200547593		
Data de nascimento:	01-05-1971	Naturalidade (concelho):	Coimbra
Sexo:	Documento de Identificação:	Data Emissão:	Arquivo:
M	9595559	-	
País Nacionalidade:	Portugal		
Morada:	n/a		
Código-postal:	n/a	Localidade:	n/a
País Residência:	n/a		
Telefone (casa):	Telefone (emprego):	Telemóvel:	E-mail Contacto:
00351 239 410663	00351 239 829714	00351 91 8763593	ruisilva@saturno.fis.uc.pt

Habilidades Académicas do Investigador

Ano	Grau	Domínio científico	Designação do Curso	N.Anos
2002	DOUTORAMENTO	Física		
Título da Tese (se aplicável):		Etude de polarimètres basés sur les détecteurs de CdTe en astrophysique X et gamma		
Instituição (Atrib. Grau):		. Université Louis Pasteur, Estrasburgo, França		
Classificação:		Mention Très Honorable avec les félicitations du jury		
Ano	Grau	Domínio científico	Designação do Curso	N.Anos
1997	MESTRADO	Física Tecnológica		
Título da Tese (se aplicável):		Circuitos Analógicos de Polarização e Acoplamento Óptico para Contadores Gasosos de Cintilação Prop		
Instituição (Atrib. Grau):		Faculdade de Ciências e Tecnologia . Universidade de Coimbra		
Classificação:		Muito Bom na tese/ 17 valores na componente lectiva		
Ano	Grau	Domínio científico	Designação do Curso	N.Anos
1994	LICENCIATURA	Engenharia Física		
Título da Tese (se aplicável):				
Instituição (Atrib. Grau):		Faculdade de Ciências e Tecnologia . Universidade de Coimbra		
Classificação:		15 valores		

Actividades anteriores e situação actual em termos científicos e/ou profissionais:

Período	Cargo ou Categoria	Instituição
1º semestre 93/94	Estudante Erasmus	Dipartimento di Fisica, Università di Padova, Italia
de 01/03/1996 a 30/09/1998	Monitor	Observatório da Universidade de Coimbra do Departamento de Matemática da Universidade de Coimbra
de 01/10/1997 a 30/09/1998	Bolseiro Técnico de Investigação (BTI/14504/97/PRAXISXXI)	Universidade de Coimbra
desde 01/10/2002	Bolseiro de Pós-Doutoramento (BPD/11670/2002)	Universidade de Coimbra

Área de actividade científica

Instrumentação atómica e nuclear e instrumentação para astrofísica de raios X e raios gama.

21d.

Área de actividade científica (Domínio de especialização, investigação e outras competências/actividades)

Domínio de especialização

Física tecnológica, detectores de radiação X e gama para astrofísica

Actuais interesses de investigação

Actualmente o candidato está a desenvolver a sua actividade científica no Departamento de Física da Universidade de Coimbra através de uma bolsa de pós-doutoramento da Fundação para a Ciéncia e Tecnologia. Essa actividade no desenvolvimento de um polarímetro, baseado em elementos semicondutores de telureto de cádmio (CdTe), para o estudo de radiação X e polarizada em astrofísica no âmbito de uma cooperação com o IASF (Istituto di Astrofísica Spaziale e Física Cosmica) de Bolonha, Itália.

Paralelamente o candidato está a dirigir um projecto de desenvolvimento de detectores gasosos de radiação baseados em microestruturas para a detecção de raios X solares em cooperação com a Academia das Ciéncias da China.

Outras competências/actividades

Actualmente membro da direcção da Sociedade Portuguesa de Astronomia desde Setembro de 2003

Co-autor das classes do programa GEANT 4 (CERN) que simulam o efeito Compton para radiação polarizada (a partir das versões 3.x, 2001).

Coordenação e projecto do experimento POLCA (POLarimetry with Cadmium telluride Array) - primeiro teste de um polarímetro de raios X e raios gama no seio de um acelerador de sincrotrão - realizado em Junho de 2002 no ESRF (European Synchrotron Radiation Facility), Grenoble, França.

Experiéncia na orientação

Agosto 2003 a Dezembro de 2004:

Trabalho do bolseiro de investigação Eng. Nuno Filipe Camarneiro Mendes no âmbito dos projectos POCTI/FNU/49561/2002 e POCTI/FP /FNU/50228/2003

Desde Fevereiro de 2005:

Trabalho do bolseiro de investigação Lic. Matilde Teixeira Dias Castanheira no âmbito do projecto POCTI/FP/FNU/50228/2003

Participação em Projectos

Coordenador dos projectos:

- Detectores de CdTe para polarimetria de raios X e de raios gama? (POCTI/FP/FNU/50228/2003);
- "Plano focal de CdTe para telescópio espacial de raios gama equipado de lentes de Laue" (PTDC/CTE-SPA/65803/2006).

Membro da equipa nos projectos:

- ?Processos Físicos em Detectores Gasosos com Microestruturas II? (CERN/FIS/43787/2001);
- ?Processos Físicos em Detectores Gasosos com Microestruturas III? (POCTI/FNU/49561/2002);
- "Técnicas para espectrometria de raios-gama de baixa energia à temperatura ambiente" (POCTI/FP/FNU/50222/2003).

Prémios e distinções

TEKNOLOGIE MAGISTEREXAMEN MED RYMDTEKNIK SOM HUVUDÄMNE

*Degree of Master of Science in Engineering
with a major in Space Engineering*

Colin Paul Gloster

3 July 1980 (Date of birth)

uppfyller i enlighet med bestämmelserna i högskoleförordningen (SFS 1993:100)
samt universitetsstyrelsens beslut kraven för teknologie magisterexamen.

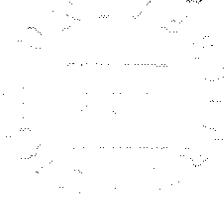

*has been awarded the Degree of Master of Science in Engineering in accordance with the
provisions of the Higher Education Ordinance (SFS 1993:100) and examination regulations
issued by the Board of Umeå University.*

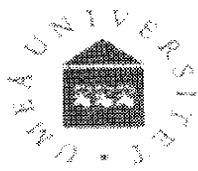

Umeå 2006-06-16

På rektors vägnar
On behalf of the Vice Chancellor's Office

Marie Wilhelmsson
Examenshandläggare

Degree Evaluation Officer

Colin Paul Gloster

3 July 1980 (Date of birth)

uppfyller härförmed kraven för teknologie magisterexamen.
has been awarded the Degree of Master of Science in Engineering.

KURS Course	POÄNG Credit points	BETYG Grade	DATUM Date

På rektors vägnar
On behalf of the Vice Chancellor's Office

Marie Wilhelmsson
 Examenshandläggare
Degree Evaluation Officer

Teknologic magisterexamen uppnås efter fullgjorda kursfordringsar om sammanlagt minst 160 poäng.
 I dessa poäng ingår minst 80 poäng i huvudämnet varav 20 poäng utgör examensarbete.

Kursernas omfattning anges av poängantalet, varvid 20 poäng motsvarar en termins heltidssstudier.

(A Master of Science in Engineering degree is awarded after completion of courses carrying a total of at least 160 credit points (4 years of study).

The major subject carries 80 of these credit points and includes a 20-credit points degree assignment.

One credit point is equivalent to one week of full-time study, and an academic year comprises 40 credit points.

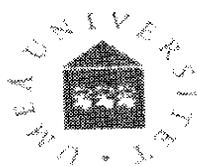

För kurs ges betyget Godkänd (3), icke utan beröm godkänd (4) eller Med beröm godkänd (5).
/The grades awarded for the courses are Pass (3), Pass with Merit (4) or Pass with Distinction (5).

¹ Beslut fattat 2006-06-16 angående tillgodoräknad examen. Originalbevis utfärdat vid Dublin City University, Irland. /Original degree certificate awarded at Dublin City University, Ireland. Decision concerning the evaluation of credits is approved by Umeå University and confirmed on 16 June 2006.

² Studier vid Luleå tekniska universitet. Betygsgrader: (3) godkänd, (4) icke utan beröm godkänd eller (5) med beröm godkänd.
/Studies at Luleå University of Technology, Sweden. The available grades are: Three (3), Four (4) and Five (5). A higher figure signifies a better grade.

³ För kurs ges betyget godkänd./The grade awarded for the course is 'Pass'.

Fastställt 1997-04-29./Effective from 29 April 1997.

5. Information on the function of the qualification

5.1 Access to further study: The degree gives access to postgraduate training. For more information on higher education in Sweden, please go to point 8, appendix 2.

5.2 Professional status (if applicable): No special information is indicated; gives access to employment.

6. Additional information

6.1 Additional information: None.

6.2 Further information sources:

The National Agency for Higher Education (Högskoleverket) has been commissioned to act as the Swedish NARIC and is also part of ENIC. The NARIC/ENIC office provides information on education in Sweden. The address to the Agency is National Agency for Higher Education (Högskoleverket), P.O Box 7851, SE - 103 99 Stockholm, phone + 46 8 5630 8500, fax + 46 8 5630 8650, <http://www.hsv.se>

Umeå University, SE-901 87 UMEÅ, phone +46 90 786 5000, <http://www.umu.se>

7. Certification of the supplement

7.1 Date: 28 June 2006

7.2 Signature and official stamp or seal (if used)

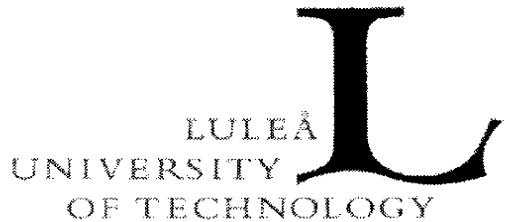

A handwritten signature in black ink, appearing to read 'Marie Wilhelmsson'.

Marie Wilhelmsson

7.3 Capacity: Degree Evaluation Officer

8. Information on the national higher education system

Information on the Swedish higher education system of enclosure.

UNIVERSITÀ DI PISA

Area Servizi per la Didattica - Dirigente: Dr. M. Bellandi
Ufficio "Laureati" Responsabile: Dott.ssa M. Tognini - DOTT/mgs

Pisa, 7 September 2007

TO WHOM IT MAY CONCERN

This is to certify that Mr. Colin Paul GLOSTER born on July the 3rd 1980 in Dublin (Irlanda) (ÉIRE), attended the second year of Ph.D. degree course in "Engineering of the information" (year 2006).

It is hereby certified that Mr. Colin Paul Gloster has formally provided notice that he shall quit the Ph.D. course in "Engineering of the information" instead of continuing with September the 9th 2007 as the final day of his studies.

The Administrative Responsible
(Dr.ssa Maria Tognini)

A handwritten signature in black ink, appearing to read "Colin Gloster". To its left is a small circular official seal.

The compiler
(Maria Grazia Sbrana)

A handwritten signature in black ink, appearing to read "Colin Gloster".

The translator
(Dr.ssa Silvia Madrigali)

A handwritten signature in black ink, appearing to read "Silvia Madrigali".

PROFESSOR MARIA SLOWEY, REGISTRAR
NB. This is an important document of record of your examination results which you should keep carefully. Replacement copies of this Statement of Results, which will be issued on written request only, will be supplied subject to payment of the stipulated fee. Information, extracted and summarised from the University's Academic Regulations, is given overleaf to assist in the interpretation of these results.

30 April 2000

DATE OF ISSUE

Interpretation of Results

The underlined notes have been extracted and summarised from the University's Academic Regulations which should be consulted if precise and detailed information is required. This information is provided to assist in the interpretation of the results provided overleaf on the statement of results.

1. Interpretation of Data

The results for each semester will indicate the code, title and duration of each module, together with the percentage mark, ECTS Grade awarded and the number of DCU/ECTS credits earned.

Duration Code:	S	=	Single Semester	Y	=	Full Academic Year
Result Code:	A	=	Absent	I	=	Certified Illness
	AD	=	Registered for attendance only	L	=	Laboratory Pass only
	C	=	Pass by Compensation	P	=	Pass
	D	=	Deferred result	T	=	Theory Pass only
	E	=	Exemption	W	=	Failed a Coursework element
	F	=	Fail	X	=	Failed an Examination element
	FN	=	Fail (No Autumn Repeat)			

ECTS Grade:	A	Excellent:	outstanding performance with only minor errors
	B	Very Good:	above average performance but with some errors
	C	Good:	generally sound work with some notable errors
	D	Satisfactory:	fair but with significant shortcomings
	E	Sufficient:	minimum criteria met
	FX	Fail:	some more work required
	F	Fail:	considerable further work required

DCU/ECTS Credits:

A Student attending full time at the University will normally be expected to complete each academic year the equivalent of 12 modules, each module with a value of 5 ECTS (European Credit Transfer System) credits. ECTS credits describe the student workload required per module. A student would thus accumulate 60 ECTS credits per year. A 3-year degree programme would therefore have a total ECTS credit value of 180 and, similarly, a 4-year degree programme would have a value of 240 ECTS credits. In exceptional circumstances students may be permitted to earn more than 60 credits in any given academic year.

2. Assessment Methodology

In general, student performance is determined at the conclusion of each academic year. In taught programmes, this is based on a combination of attainment in end-of-semester examinations (both semesters) and continuous/phased assessment of academic exercises carried out throughout the academic year. Research programmes of study are assessed on the basis of a submitted thesis and oral examination, although in the case of Masters degrees the latter may be waived at the discretion of the examiners.

3. Progression

Progression to the subsequent examination stage of a degree programme is dependent upon the student meeting all academic and other requirements as laid down in the University's Academic Regulations for the Award of Degrees. Honours level classifications are indicated for interim stages of programmes.

4. Pass Mark

The minimum mark required for a pass in an examination subject is 40% unless stated otherwise. A candidate who fails to attain the required pass standard in all examination subjects taken at a single sitting may, at the discretion of the Board of Examiners, be allowed to pass the examination as a whole by compensation, subject to the approval of Academic Council.

5. Exemptions

In general, all examination subjects passed by a candidate in a particular year of study should have such passes held in perpetuity unless removed as a consequence of a subsequent disciplinary decision approved by Academic Council. However, students should check their Faculty Booklet for any exceptions to this rule.

6. Award Classifications: Primary Degrees

The award of a Bachelor Degree is made at the levels given below. Normally the level of award is derived from the final year performance unless where stated otherwise in Academic Regulations.

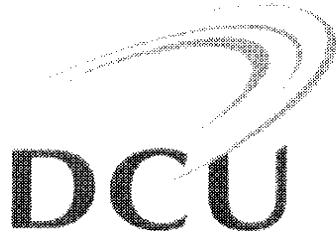

Level of Award	% Average Mark	Level of Award	% Average Mark
First Class Honours	Not less than 70%	Third Class Honours	Not less than 50%
Second Class Honours-Grade 1	Not less than 63%	Pass	Not less than 40%
Second Class Honours-Grade 2	Not less than 55%		

Please note that in certain Faculties, Third Class Honours degrees are not awarded. Students should check their Faculty Booklet for details.

7. Award Classifications: Other Awards

- 7.1. A Certificate, Diploma, Graduate Certificate, or Graduate Diploma (in most cases) may be awarded with the classification of distinction, where the percentage average mark is not less than 70%, or credit, where the percentage average mark is not less than 60%. In some cases the minimum pass mark for certain degree programmes is 50%. Students should check their Faculty Booklet for Award Classifications.
- 7.2. A Master's Degree obtained through coursework and dissertation may be awarded with first class honours where the percentage average mark is not less than 70%, or with second class honours where the percentage average mark is not less than 60%. The minimum pass mark for certain Masters degrees, and in some cases, Graduate Diploma programmes is 50%. Students should check their Faculty Booklet for Award Classifications.
- 7.3. A Master's Degree by research is of honours standard and is awarded without classification.
- 7.4. The degree of Doctor of Philosophy, Ph.D. is awarded without classification.

Subject: Reference for Mr. Colin Gloster, Computer Applications (Computer Science) Graduate 2003

To Whom It May Concern:

On 2003, I was Mr. Gloster's staff supervisor for his final year project. In our Computer Applications degree at DCU, the project is a major element of a student's final year's work. It is possible for students to do group projects but Mr. Gloster, like the majority of the class, did his project alone. While working in a group gives an opportunity to improve teamwork and communication skills it would have been hard for Mr. Gloster to find a partner who shared an interest in his chosen topic.

This supervision is the main basis of my knowledge of Mr. Gloster, not having previously taught him in other modules. I did assess his third year project, which reflected his interest in the Ada programming language. My memory of that assessment was that he had clearly done a good deal of work but that he should have made a greater effort to present it, particularly to put it in context for a non-specialist audience. I understand that his knowledge of Ada is self acquired, as we do not teach it in the school.

His final year project was entitled "On-board data processing for a principal investigator" and consisted of developing a subset of the software that would be required for a satellite borne scientific instrument. His idea, a sensible one, was to take part of the specification of an actual instrument as his starting point. His intention was to implement both some low-level (operating system) functionality (including checks on

Page 1 of 2

Telephone 353 (0)1 700 5287
Facsimile 353 (0)1 700 5442
Website www.computing.dcu.ie

5108

memory), and some higher level functionality (including filtering for data smoothing and compression). He also needed to develop some basic user interface software as a means of presenting the work. In general, he carried out the project very well, investing a great deal of time, and achieved I believe a mark of 70% for it.

Mr. Gloster was quite organised in his conduct of his project - we had a weekly meeting, at his request, where he reported progress and what he planned to do next. He showed initiative in making external contacts to get needed information; in particular, he made contact with Imperial College to obtain data on the data filtering mentioned above. On occasion, I found that Mr. Gloster needed to be encouraged to document and present his ideas clearly, without superfluous and irrelevant material.

Mr. Gloster is clearly very interested in the development of on-board software for spacecraft or scientific instrument control and support, where Ada is commonly used. I believe he actively follows web discussions and interest groups on aspects of Ada. In general, I found that Mr. Gloster was quite knowledgeable about the technologies and issues that are relevant to this kind of software development.

In conclusion, Mr. Gloster has a very keen, long-standing interest in on-board software development and would, I believe, be highly motivated in pursuing postgraduate research in this area. Moreover, his examination results demonstrate that he has the academic potential to be successful in such research.

September 11, 2007

To whom it may concern,

I have known Colin Paul Gloster since February 2006 as a graduate student in my course on Numerical Methods for Engineers at the Engineering PhD School "Leonardo da Vinci" of the University of Pisa.

As his professor, I have had the opportunity to evaluate his capacity for theoretical and applicative studies. In my opinion the applicant is a student with various intellectual interests, a proper preparation in computational mathematics and the potential to succeed in advanced education and research.

Yours sincerely

Re: Colin Paul Gloster

Dear Sir/Madam

With regard to the above-named student's application for postgraduate research, I have acted as a lecturer and project supervisor for him a number of years ago, and have found him to be a solid if not exceptional student. Colin has his own independent view on how things should be done, which can be a good quality in a postgraduate researcher, but this may need to be channeled in the appropriate direction.

Colin is a hard worker, and has a healthy enthusiastic attitude towards his work. He would therefore make a positive addition to a postgraduate research team.

Yours sincerely

Dr G W Hamilton (Senior Lecturer)

From: IdBolsas <id.bolsas@fct.mctes.pt>

To: <Colin_Paul_Gloster@ACM.org>

Exmo(a) Senhor(a)

No âmbito do concurso de 2008, as candidaturas a bolsas de investigação em C&T foram analisadas por painéis de avaliação, constituídos por peritos das respectivas áreas científicas, que classificaram os méritos do candidato, do programa de trabalhos a desenvolver e das condições de acolhimento proporcionadas pela respectiva unidade de investigação.

No caso da sua candidatura, a pontuação atribuída pelo painel de avaliação, que teve por base os elementos apresentados no seu processo, conjugada com a definição da linha de corte, implica a recusa da bolsa.

Dando cumprimento ao estabelecido no Código do Procedimento Administrativo, nomeadamente nos seus Artigos 100º e 101º, poderá, se assim o entender, formular no prazo de 10 dias úteis as observações que eventualmente considere convenientes, para que possa ser tomada pela FCT uma decisão final.

Deverá para tal utilizar unicamente a ligação disponível na página onde poderá aceder à transcrição da sua ficha de avaliação, no endereço www.fct.mctes.pt/fctsig utilizando os códigos de acesso que lhe foram atribuídos pela FCT quando se candidatou.

Com os melhores cumprimentos

Francisco Sepúlveda Teixeira

Vice-Presidente da FCT

Dear Sir or Madam

Concerning your application, we regret to inform that the score awarded by the evaluation panel, based on the elements you submitted, together with the definition of the minimal score needed, implies that the grant will not be awarded. The evaluation process took into consideration the following criteria: merits of the candidate, quality of the working plan and excellence of the hosting institution.

Following this evaluation result, according to the Portuguese law, you can, if you wish, send us your comments, within the next ten working days. Then, you will be informed of the FCT final decision. These comments must be submitted online at the same web site where your evaluation report will be available, www.fct.mctes.pt/fctsig using the credentials assigned to you by FCT.

Yours sincerely,
Francisco Sepúlveda Teixeira
Vice-President of FCT

Carta comentário no âmbito do período de audiência prévia: [lacrada a 16-12-2008 21:02:00]

My first foreign degree was wrongly judged to be equivalent to a Portuguese value of 12/20. My first foreign degree is at 67.7% in the scale of Dublin City University, which would be rectilinearly converted to $13.54/20 = 67.7\% \times 20 / 20$. That rectilinear conversion would result in more than 12/20, but still underestimates the equivalent Portuguese value because the minimum passable Portuguese value is 10/20 but the minimum passable Irish value is 40% instead of the Portuguese 50%. Therefore, a less unfair conversion is a Portuguese value of $((67.7\%-40\%)/0.6 \times 10 + 10) / 20 = 14.6/20$. Dublin City University described its scale on the last page of primary_degree_of_Mister_Gloster.pdf which was part of the application.

According to the table of Page 31 of the European Commission document "Sistema Europeu de Transferência de Créditos - Manual do Utilizador do ECTS [European Credit Transfer and accumulation System]", available from for example

www.ul.pt/pls/portal/docs/1/49191.PDF

and

http://www.fam.ulushiada.pt/downloads/bolonha/ects_manual.pdf

and

<http://www.dqb.fc.ul.pt/bolonha/ECTS.pdf>

and

http://web.archive.org/web/20040827163202/http://www.uc.pt/ge3s/guia/docs/ects_manual.pdf

, my B.Sc. mark "2ND CLASS HONOURS GRADE 1" (67.7%) which corresponds to an ECTS B (check the B's on my transcripts for modules in which I had been awarded 63% to 69% and the A's for modules in which I had been awarded 70% and higher) correspond to "Muito Bom" which should be converted to a mark between 16/20 and 17/20 in the Portuguese system according to the article 17 of the Decreto-Lei n.º 42/2005, de 22 de Fevereiro (Princípios reguladores de instrumentos para a criação do espaço europeu de ensino superior; <http://www.portugal.gov.pt/Portal/Print.aspx?guid={8B6F1381-E8A8-4260-8C21-2CFC522720EE}>).

So, according to <http://alfa.fct.mctes.pt/apoios/bolsas/concursos/guiao2008.pdf>

I should be evaluated to be worthy of a merit of at least 4/5 instead of the 2/5 which you misjudged me to have earned.

Carta para apresentação de recurso:

I submitted comments timestamped "16-12-2008 21:02:00" via the

website, but I have not received an answer. At 10:50a.m. on

February 23rd, 2009 I telephoned FCT on 213 924310 and I was

advised that I should have received a response by email.

In addition to the comments on the website, one of my co-supervisors

emailed FCT concerning this, as have I, and no response to any of

these emails has been received. If none of this appeal and the earlier

emails and the earlier comments shall be answered, then I shall make a

formal complaint.

Please find below a copy of the comments which I had submitted via the

website, and a copy of the two emails.

I checked again today, and the website wrongly contains the assertion

"Tendo em conta a classificação no BsC (4 anos) que considerámos

equivalente a 12 valores". Please rectify this. On what legal basis

did you perform this conversion?

Rui Silva emailed to bolsas@FCT.MCTES.Pt with subject "Recurso

SFRH/BD/46372/2008" timestamped Wed, 11 Feb 2009 16:40:51 +0000 (WET):

"Exmos. senhores,

Na passada sexta o Mestre Colin Paul Gloster recebeu um email

informando-o de que o recurso referente ao pedido de bolsa

SFRH/BD/46372/2008, do qual sou orientador responsável, foi

rejeitado. No entanto tal como foi escrito no pedido de recurso

a equivalência da sua nota de licenciatura interpretada pela

Fundação para a Ciéncia e a Tecnologia não respeita os acordos

europeus estabelecidos nesta matéría, e que Portugal se comprometeu

respeitar.

Se o motivo da rejeição do recurso do Mestre Colin Paul Gloster

se deve a insuficiente classificação (<4.0) após a alterada

da sua média de licenciatura, gostaríamos de saber qual a nova

média que lhe foi atribuída. Caso não tenha sido alterada, deveremos

proceder a uma reclamação, dado que os acordos europeus nesta

matéría não estão a ser respeitados.

Abaixo segue a cópia do texto do recurso.

Os meus sinceros cumprimentos,

63d.

Rui Silva"

Colin Paul Gloster emailed to info.bolsas@FCT.MCTES.Pt with timestamp

Thu, 5 Feb 2009 18:39:41 +0000 (UTC):

"Dear Sir/Madam,

I locked the comments reproduced below in December 2008.

[...]

Yours sincerely,

Colin Paul Gloster

My first foreign degree was wrongly judged to be equivalent to a Portuguese value of 12/20. My first foreign degree is at 67.7% in the scale of Dublin City University, which would be rectilinearly converted to $13.54/20 = 67.7\% \times 20 / 20$. That rectilinear conversion would result in more than 12/20, but still underestimates the equivalent Portuguese value because the minimum passable Portuguese value is 10/20 but the minimum passable Irish value is 40% instead of the Portuguese 50%. Therefore, a less unfair conversion is a Portuguese value of $((67.7\%-40\%)/0.6 \times 10 + 10) / 20 = 14.6/20$. Dublin City University described its scale on the last page of primary_degree_of_Mister_Gloster.pdf which was part of the application.

According to the table of Page 31 of the European Commission document "Sistema

Europeu de Transferência de Créditos - Manual do Utilizador do ECTS [European

Credit Transfer and accumulation System]", available from for example
