

## Integrated Responsibility Centre of Psychiatry and Mental Health

### CLINICAL INFORMATION

To Whom It May Concern, I hereby inform that Professor Maria Filomena Osório Pinto dos Santos Figueiredo is monitored by the Psychiatric Outpatient Services of CHUC since February 2015.

According to the clinical records, her condition is especially characterized by recurrent anxiety symptoms and depression, with an associated perception of limited performance regarding both social and professional tasks.

This clinical condition followed an assault she fell victim of, on the year 2014. Out of this assault there were aftereffects, which justified several clinically significant surgeries, with typical demonstrations of post-traumatic stress.

She is currently medicated with escitalopram and it is not yet clear whether there is a complete remission of the symptoms which justified this appointment.

Coimbra, the 8th of September 2016
